## PROFESSIONAL SUMMARY

AI/ML student with hands-on experience in machine learning, data analysis, and AI-driven applications. Skilled in Python, data preprocessing, model development, and extracting insights from complex datasets. Passionate about building intelligent solutions and applying AI to solve real-world problems.

## EXPERIENCE

- |                                                                                                                                                                                                                                    |                             |

## PROJECTS

### AI-Powered Study Planner

- Developed an intelligent study planning application that generates personalized schedules and task recommendations based on user preferences and learning goals.
- Technologies: Python, Streamlit, SQLite

### AI Recommendation System

- Built a recommendation engine using Python to suggest relevant content/items based on user interests and preference matching algorithms.
- Technologies: Python, Pandas

### Rule-Based AI Chatbot

- Designed and implemented an interactive chatbot using Python and rule-based NLP techniques for automated user communication.
- Technologies: Python, NLP

### Face Recognition System using PCA and ANN

- Developed a facial recognition model using Principal Component Analysis (PCA) and Artificial Neural Networks (ANN) for image classification and identity recognition.
- Technologies: Python, OpenCV, NumPy, Scikit-learn, TensorFlow, PCA, ANN, Machine Learning, Computer Vision

### Image & Text Recognition System

- Developed a Python program for image classification and OCR.
- ResNet18 with Imagenet pre-trained weights used for object identification in images.
- Integrated EasyOCR to extract and recognize text from image files.
- Utilized pre-trained models and open-source libraries to build an efficient AI-powered recognition system.
